

PROTECTION

Anti-Bandit Glass SSG® DuraShield

Anti-Bandit Glass

SSG® DuraShield is designed as a high security, anti-bandit glass for maximum protection against intruders. It consists of a multi-layered glass composition capable of resisting the most severe vandalism by weapons such as an axe or a hammer. When broken by impact, the glass adheres to the interlayer and will stay in the frame,

minimising the risk of injury from sharp edges, flying or falling glass and strongly resisting penetration by the intruder.

SSG® DuraShield provides the building owner and occupants a physically safe environment and a complete peace of mind.

SPECIFICATIONS: Production Sizes

Maximum glass weight is 1 tonne per unit.

Production size for this product varies. Get in touch with us for more information!

Anti-Bandit Glass

PRODUCT FEATURES

MAXIMUM SECURITY

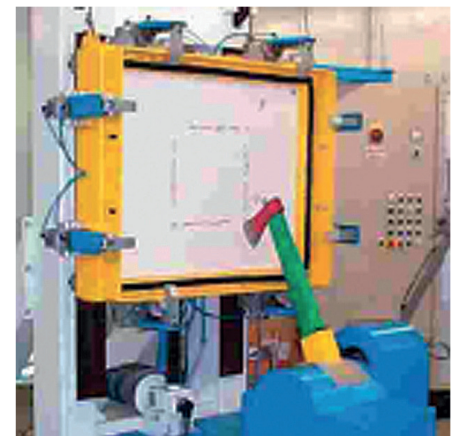

Recommended in places where money is handled, or where high value items are displayed. In most cases, it takes many blows, all at the same spot, to penetrate the glass. Before this happens, security personnel would have responded and nullified the attack.

ULTRAVIOLET SCREENING

Provides protection from the harmful effects of UV radiation. It screens out more than 99% of the sun's damaging rays, protecting interior furnishings, displays or merchandise from the fading effects of UV radiation.

USES AND APPLICATIONS

- Jewellery displays
- Museum artefacts
- Window displays

EN356 Axe Test
