

SPECIALTY

Luminous Glass SSG® Luminescent Glass

SSG® Luminescent Glass illuminates in the dark. It is the result of glass combined with luminous coatings to give a special visual effect in the absence of light. The special coating gets energised by normal lighting to glow in the dark. SSG® Luminescent Glass is available in heat-strengthened, tempered on clear or tinted glass substrates either in full coat or custom patterns. Coloured versions can also be achieved with colour PVBs in laminated glass.

SSG® Luminescent Glass is coated on the inner surfaces for interiors and can be used in many applications such as floor inserts for theatres or as a light source in public facilities. For building developments, its unique detailing on the façade will stand out and make a statement at night.

PRODUCT FEATURES

DESIGN BENEFITS

SSG® Luminescent Glass as a glow-in-the-dark product adds dynamism to your design as it illuminates intuitively when light is absent. It is the product that can deliver romanticism or an air of mystery to interior designs.
